SUMMARY

Final year Bachelor Of Computer Science (Software Development) student at Universiti Teknikal Malaysia Melaka (UTeM) who has experience in full-stack web and Android app development using React, Flask, Kotlin, and Firebase. Works from the beginning, from designing the database, to building the REST API, to AI/LLM integration and into testing. Wants to use these skills on real production work in a software engineering or IT internship.

TECHNICAL SKILLS

Languages: Python, JavaScript, Kotlin, PHP, SQL, HTML/CSS

Frameworks & Libraries: React, Flask, Jetpack Compose

Databases: Firebase Firestore, MySQL

AI & APIs: Google Gemini API, REST API design and integration

Tools: Git, Android Studio, VS Code, Figma, Canva

Practices: Agile SDLC, database modelling (ERD, normalization)

PROJECTS

OmniTrack — Cross-Media Entertainment Tracker (Final Year Project)

2025 – 2026

React, Flask, Firebase Firestore, Google Gemini API

- Designed and built a full-stack web app that lets users track movies, music and games in one unified dashboard.
- Developed a React 19 frontend and a Flask REST API backed by Firebase Firestore, structured around a three-tier architecture.
- Integrated the Google Gemini API to power an AI assistant for recommendations and queries, with dual model slots and a daily usage cap for cost control.
- Added a notification system and a tokenised parental-monitoring dashboard for account oversight.

Cat Adoption and Care System — Diploma Final Year Project

2024 – 2025

PHP, MySQL, HTML/CSS, Figma

- Single-handedly developed a role-based web platform (admin, adopter, cat owner) to digitize the cat adoption, return, and reporting process.
- Implemented seven modules including authentication, cat search and listing, an adoption-request approval workflow, adoption history, profile management, and monthly PDF report generation.
- Wrote full documentation of the system including context and data-flow diagrams, ERD with data dictionary, and module specifications using an Agile SDLC methodology.
- Validated every module with structured test cases covering valid, invalid, and edge-case inputs.

AIRS — Automated Inspection & Reporting System (Group Project for iPetro)

2025

Flask, MySQL

- Led Module 3 (Inspection Records & Photo Management) in a team implementing an inspection-automation system for a petrol-station client.
- Built the Flask/MySQL backend for record handling and photo uploads and wrote manual tests.

Android Projects — CampusCycle

Kotlin, Jetpack Compose, Firebase

- Built several Android apps, including a campus marketplace (CampusCycle) using Kotlin, Jetpack Compose, and Firebase.

EXPERIENCE & LEADERSHIP

Shopee Affiliate Content Creator (Self-employed)

Present

Threads @_ammaq.k

- Built and grew a product-review presence from scratch, planning and publishing a documented content strategy aimed at students and budget-conscious buyers.
- Tracked reach and click-through metrics weekly and iterated the content approach based on performance data.

Facilitator — SULAM Community Program, UTeM

2022

- Taught basic algebra to secondary-school students and coordinated with a team to run the program.

EDUCATION

Universiti Teknikal Malaysia Melaka (UTeM)

Expected 2027

Bachelor Of Computer Science (Software Development) with Honours — Final Year

- Relevant coursework: Software Project Management, Database Design, Mobile/Android Development, Web Programming, Technology Entrepreneurship.
- Dean's Award recipient (Semesters 1–2).

Universiti Teknikal Malaysia Melaka (UTeM)

2022 – 2025

Diploma in Computer Science

- Dean's Award recipient (Semesters 1–2).
- Final Year Project: Cat Adoption and Care System.

ADDITIONAL

Languages: Malay (native), English (professional working proficiency)

Achievements: Dean's Award (Diploma & Bachelor), Board of Prefects, SMK Tinggi Bukit Mertajam (2019–2022)

Design Tools: Microsoft Office, Canva, Adobe Photoshop
